MENINGOCOCCAL MENINGITIS VACCINATION

Dear Parent:

I am writing to inform you about meningococcal disease, a potentially fatal bacterial infection commonly referred to as meningococcal meningitis. New York State Public Health Law (NYS PHL) §2167 and Subpart 7-2 of the State Sanitary Code requires overnight children's camps to distribute information about meningococcal disease and vaccination to all campers who attend camp for 7 or more consecutive nights.

Adirondack Woodcraft Camps is required to maintain a record of the following for each camper:

- A response to receipt of meningococcal disease and vaccine information signed by the camper's parent or guardian; AND EITHER
- · A record of meningococcal meningitis immunization OR
- An acknowledgement of meningococcal disease risks and refusal of meningococcal meningitis immunization signed by the camper's parent or guardian.

Meningococcal disease is a serious bacterial illness. It is a leading cause of bacterial meningitis in children 2 through 18 years old in the United States. Meningitis is an infection of the covering of the brain and the spinal cord.

Meningococcal disease also causes blood infections.

About 1,000- 1,200 people get meningococcal disease each year in the U.S. Even when they are treated with antibiotics, 10-15% of these people die. Of those who live, another 11%-19% lose their arms or legs, have problems with their nervous systems, become deaf, or suffer seizures or strokes.

Anyone can get meningococcal disease. But it is most common in infants less than one year of age and people 16-21 years. Children with certain medical conditions, such as lack of a spleen, have an increased risk of getting meningococcal disease. College freshmen living in dorms are also at increased risk.

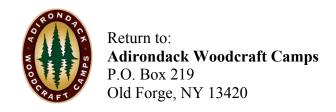

Meningococcal infections can be treated with drugs such as Penicillin. Still, many people who get the disease die from it, and many others are affected for life. This is why preventing the disease through use of meningococcal vaccine is important for people at highest risk.

RESPONSE FORM

New York State Public Health Law requires that a parent or guardian of campers who attend an overnight children's camp for seven (7) or more consecutive nights, complete and return the following form to the camp.

Check one box and sign below.	
My child has had the meningococcal Menveo.	conjugate vaccine (MCV4), for example Menactra or
Date received:	_
adolescents 11 through 18 years of age: the	Prevention (CDC) recommend two doses of MCV4 for all e first dose at 11 or 12 years of age, with a booster dose at HIV infection should get three doses: 2 doses 2 months ge 16.
` , •	13 and 15 years of age, the booster should be given es) is given after the 16th birthday, a booster is not needed.
disease.	o me, the information regarding meningococcal meningitis g the vaccine. I have decided that my child will not obtain I meningitis disease.
